

SUMMARY

Frontend engineer specialising in scalable React and TypeScript applications and design systems for high-traffic e-commerce, and increasingly focused on AI-native products powered by LLM tool-use. Owns features end-to-end from design through deployment, building shared component libraries with attention to performance, accessibility, and quality.

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Styling & Design Systems: Styled-components, responsive & cross-browser design, theming, Storybook, atomic design

State & Data: React Context, Redux, REST APIs, OpenAPI

Testing & Accessibility: Jest, Vitest, React Testing Library, Playwright, WCAG, semantic HTML, ARIA, code reviews

Tooling & Delivery: Git, Vite, Webpack, Node.js, Docker, GitLab CI/CD, AWS (S3), Sentry, Figma, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer (Frontend) — Future plc, London Nov 2022 – Present

- Architected and maintained a 96-component shared design system in React, TypeScript and styled-components, with full Storybook 8 documentation, adopted team-wide for consistency and velocity.
- Built a multi-channel e-commerce frontend (Next.js, React, TypeScript) serving 6+ branded regional sites from a single codebase, with server/client component architecture, dynamic theming, and a feature-flag-driven personalisation engine using JSON Logic for A/B-style experiments.
- Integrated type-safe REST API clients from OpenAPI-generated TypeScript definitions, with authentication flows (Auth0, JWT) and error monitoring via Sentry.
- Applied built-in Next.js performance features such as image optimisation, code-splitting via dynamic imports and font-loading strategies, and used bundle analysis to keep load times low on high-traffic pages.
- Built automated unit, integration and end-to-end tests with Jest, React Testing Library and Playwright; configured GitLab CI/CD pipelines with coverage reporting and SonarQube quality gates.
- Implemented accessibility to WCAG AA (semantic HTML, ARIA, keyboard navigation and focus management), and led code reviews and cross-functional work with product, design and backend teams in agile sprints.

Graduate Developer — Future plc, London Oct 2021 – Nov 2022

- Developed 20+ reusable React components with styled-components for a greenfield rebuild of Future's Magazine Direct website, establishing UI patterns that accelerated team delivery.
- Implemented responsive, cross-browser layouts using theme-based design tokens and breakpoints for consistent rendering across devices.
- Wrote unit and integration tests with Jest and React Testing Library, improving code reliability.
- Shipped features in short agile cycles, collaborating with designers and engineers through stand-ups and code reviews with attention to WCAG standards.

Intern Developer — Future plc, London Jul 2021 – Oct 2021

- Built interactive React features for high-traffic websites and improved Jest / React Testing Library coverage, strengthening CI/CD speed and deployment confidence.

FEATURED PROJECT

Flow — AI-Powered Kanban Platform Personal Project, 2026

Further projects at joannajoseph.dev

Next.js · React · TypeScript · PostgreSQL · Claude API · Docker [Live demo](#) · [GitHub](#)

- Built and shipped a full-stack kanban app end-to-end. Developed an AI assistant using Claude's tool-use API, autonomously reading and mutating board state (create, update, reorder tasks) from natural language instructions.
- Designed multiple AI-powered features as discrete agents, standup narrative generator, deadline risk scanner, task splitter, smart reschedule proposer, and duplicate detector, letting users drive complex workflows through natural-language commands such as "move all urgent tasks to today" or "split this into subtasks."
- Used Claude Code as primary engineering tool, co-designing systems, generating architecture, and shipping features at pace without sacrificing quality.

EDUCATION

Level 4 Software Development Apprenticeship — QA Jun 2022 – Dec 2023

Full Stack Developer Bootcamp — iO Academy 2021
